

Most of us are living in a hurry. Hurry to get to school, hurry for appointments. The day has already been disrupted by the thought of it, the mental pace of life is sufficient to leave us seeking for an update of time; from the start of the day, till night time.

Spaces In Between (SIB), provides an unobtrusive way of instilling time into people. It communicates in a more subtle manner, for it is integrated into a product that most people will naturally glance to look at. SIB is designed with the thought of making time reading a more natural and pleasant process, especially during the most sensitive times of the day.

The mirror is surrounded with an acrylonitrile butadiene styrene (ABS) cover that hides its system, which can be programmable by arduino.

The minute and hour hand is differentiated by its length.
